

**Convenient Anytime, Anywhere** – You can log into PEI Learning Center at work or at home, day or night.

**Economical** – No travel costs, no travel time. The Web is available from any desktop.

**No Distractions** – No more listening to questions from other participants that have nothing to do with how the training applies to you. You can focus on how training relates to your situation.

**Certificate of Completion** – Upon completing the final exam, you can download and print a Certificate of Completion. This is especially important if you must show proof of completion to meet regulatory requirements. Only one certificate is allowed per course.

**24 hours** – You have 24 hours to complete the course. We've created breaks to remind you to get up and stretch, keep your mind fresh or deal with other business as needed.

# LEARNING CENTER

Online Training for Underground  
Storage Tank Operators

# Get the Online Advantage

Until now there has been no standardized training available for the tank owner and operator to learn the mechanics of proper maintenance and operation of their underground petroleum storage systems.

The PEI Learning Center has changed that. A comprehensive collection of online training courses designed to help owners and operators understand and manage their underground petroleum storage systems is now available through the PEI Learning Center. The training is easily accessible, consistent, and measurable.

The PEI Learning Center provides professional training for you and your employees. The Online Advantage is interactive, self-paced, and economical.

## PEI Learning Center Course Catalog

Five courses are currently available. Courses are priced at \$79 each.

<b>Automatic Tank Gauges: Tanks Only</b>	Explains the proper use of the tank gauge to manage product inventory and detect tank leaks. Includes record keeping for regulatory compliance. For Veeder-Root 300/350, Gilbarco EMC, and Red Jacket Pro Max and Pro Plus.
<b>Automatic Tank Gauges: Tanks &amp; Piping</b>	Contains the same lessons as the ATG Tanks course but includes the operation and regulatory compliance requirements for pressurized line leak detectors and secondary containment sensors. Only for those requiring the additional piping information.
<b>Understanding Single-Walled Piping</b>	Focuses on the proper operation and regulatory requirements associated with single-walled piping systems.
<b>Secondary Containment for Piping</b>	Examines the fundamental components of storage systems and the proper operation and regulatory requirements associated with double-walled piping systems.
<b>Spill Containment &amp; Overfill Prevention</b>	Covers spill bucket maintenance, the workings of overfill prevention devices and the necessity of establishing procedures to prevent delivery spills.

## PEI Learning Center Courses

Five courses are currently available. Each training course is priced at \$79.

Online training is available at any desktop, day or night. Any computer with high-speed Internet and speakers can access the courses 24 hours a day, 7 days a week.

Each training course has been carefully researched and reviewed by a panel of equipment manufacturers, installers, distributors, service companies, tank owners, industry consultants and environmental regulators.

The courses use real people that your employees can relate to. Work situations are used that they encounter any day of the week. Participants learn how

to find solutions to their problems, by watching other people resolve similar issues.

Courses are fast-paced and consist of easy-to-follow chapters composed of short video segments followed by a

quiz. A final exam is included after all segments are completed.

Reference materials and a Certificate of Completion are available to download and print.

Courses can generally be completed within one hour.

Register for the courses at

and you're on

your way to The Online Advantage.
